Professional Summary

Software engineer experienced in developing APIs and web applications, building features and fixing bugs for industry-leading products, and interacting directly with non-technical colleagues and users. Skilled in analyzing problems and developing solutions. Devoted to integrity and excellence.

Experience

W+R Studios — Huntington Beach, CA

June 2016 - Present

Software Engineer

- API and web application development with Ruby, Rails, Elasticsearch, JavaScript (ES6/React), and HTML/CSS.
- Develop GraphQL APIs for single page applications.
- Develop and maintain two versions of the internal Data Services API, while migrating legacy systems to implementing the new version.
- Refactor and develop solutions for high-throughput systems as scaling problems arise.
- Implement new features and add test coverage for legacy codebases.
- Identify and fix bugs for multiple products reported by users, support, and error reporting systems.
- Communicate and interact regularly with non-technical stakeholders, including project managers, sales, support, and users.
- Collaborate with developers, designers, and stakeholders in brainstorming and architecting solutions.

Eagle Industrial Group DBA SafeRacks — Lake Forest, CA

Feb 2012 - May 2016

Operations Specialist

- Train third-party contractors, accounting team, and customer service associates on new processes during transition to a new CRM application built with Intuit QuickBase.
- Troubleshoot bugs and UX issues during implementation of QuickBase app and provide feedback to VP of Operations and VeilSun development team.
